

Telecody Courier

The smart courier function from SOMMER

HOW TO EQUIP YOUR GARAGE WITH THE SMART COURIER FUNCTION

... OR WHEN THE POSTMAN DOESN'T RING!

This smart courier function from SOMMER allows the delivery service employee to deposit a parcel in your garage. The opening width of the garage door can be defined individually. You can choose between two security levels: The door can be opened via the red button or a numeric code.

No-one is home, so a parcel cannot be delivered.

With the Telecody Courier, the parcel can be placed in your garage.

The door opens a short distance and closes automatically once the parcel has been deposited.

Advantages:

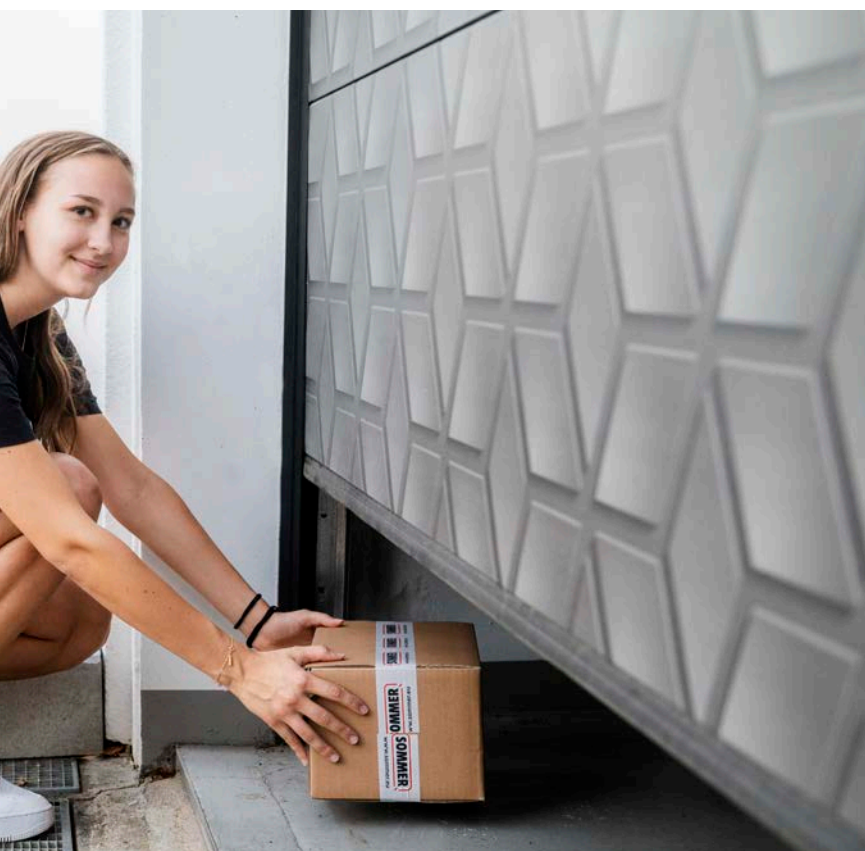

- Also ideal as radio code button
- With illuminated keys
- Memory locations: 10 different access codes, 2 unencrypted buttons or the courier function
- Weather-resistant and perfectly suited for indoor and outdoor use
- Long battery life
- Including aluminium wall holder and mounting material

Advantages of SOMloq2:

- Maximum protection against hackers thanks to 128-bit AES encryption with Rollingcode
- Radio receiver confirms received commands, an LED on the transmitter acknowledges receipt
- Commands are forwarded by SOMloq2-compatible receivers

The addressee retrieves his or her parcel simply by entering a self-defined access code.

With the Telecody Courier, parcels can be delivered or picked up simply and without stress.

A positive side-effect: Your parcels are protected against unauthorised access and bad weather.

The Telecody Courier is compatible with the SOMMER base+ and pro+ garage door operators and RDC Vision+ roller door control unit.
